

ATM Safety Scenarios

It is very late at night and the ATM user finds an ATM at the end of a dark alley.

The ATM user notices the machine they usually use looks different, but decides to use it anyway.

The ATM user has just arrived at the ATM, with someone standing right behind them. The ATM user enters their information without even trying to shield it from view.

The ATM user tries to recall their pass code (based on their birthday) by saying it out loud while someone is within easy hearing distance.

The ATM user withdraws \$300.00 from the ATM and begins to visibly count their money with someone standing close by.

A robber holding a weapon demands that the ATM user hand over the money they just withdrew. The ATM user refuses.

The ATM user "drives up" to an ATM to make a withdrawal, not noticing they are being boxed in by two other cars. **This scenario will need a third person to play the third driver.*
